

We're glad to represent information about two biggest clinics in Kiev that provide IVF treatment

About clinics

Reproductive medicine clinics offer a full range of up-to-date infertility diagnostics and treatment services in Kiev (Ukraine).

Clinics using new, "youthful" walls and quite new but the most technically advanced equipment available to date. Clinic's specialist personnel, on the contrary, can not be referred to as "young". Most of the doctors are of higher category and their experience is acknowledged by academic degrees and standings (MD, Ph.D, MBA, professors, obstetrician-gynecologists of higher category).

Clinic's experts constantly take part in specialized conferences and seminars held both in Ukraine and abroad, constantly improve their professional skills at the dedicated courses, share their experience with colleagues from domestic and foreign clinics and actively implement their best practices. All clinics are accredited on the territory of Ukraine.

Most of clinic services are listed and presented below with prices. Prices indicated in Pounds:
